Statement of Support for AI4REASON Institute by EUReason s.r.o

Prague, October 18, 2025

As part of our commitment to advancing open, verifiable, and distributed approaches to formal reasoning, **EUReason s.r.o.** is pleased to announce its support for the newly established **AI4REASON Institute** in Prague.

EUReason develops tools and infrastructure for **distributed and decentralized formal proof development**, enabling collaborative reasoning across systems and institutions. We recognize the importance of **AI4REASON's mission** — connecting artificial intelligence with mathematical rigor and automated reasoning — and believe this synergy is vital for the future of verified and transparent AI.

To assist the Institute's research and development activities, **EUReason** will provide, **free of charge**:

- Office space for up to **six researchers** at our facilities in **Prague 6**; and

- Exclusive 24/7 access to **two large computational servers**, offering **over 100 Intel Xeon CPU cores** and **60 TB of storage**, for unrestricted use in **AI4REASON's** large-scale research and experiments.

We view this contribution as an investment in the Czech and European research ecosystem for **formal reasoning**, **AI for theorem proving**, and **autoformalization**. By supporting **AI4REASON**, we strengthen a shared foundation for open, distributed, and verifiable knowledge systems.

J. Urban

Managing Director,

EUReason s.r.o. (business ID: 17389909)
